OVERVIEW

NetSuite WMS is a module within NetSuite ERP, designed to boost your operational efficiency. It streamlines warehouse tasks with smart pick-and-pack processes, barcode scanning, and seamless shipping integration.

FEATURE OVERVIEW

Key features like inventory tracking, receiving, order fulfillment, and cycle counting are all supported by real-time data and user-friendly dashboards, helping you monitor performance and labor productivity easily.

NETSUITE MOBILE APP

The NetSuite WMS mobile app helps warehouse teams work smarter. It lets users manage daily tasks like receiving, putaway, picking, and packing right from their mobile device.

This improves efficiency, cuts down on errors, and gives you accurate, real-time visibility into your inventory.

Specifically, it ensures data accuracy by capturing information directly into item records, guides users through putaway and picking processes, and optimizes order fulfillment with scannable validation to prevent costly mistakes.

NetSuite Ship Central further streamlines the packing and shipping process for both domestic and international orders. It helps you identify items going to the same destination so you can pack them together, reducing costs and speeding up delivery.

Through the app's kiosk device, you can:

- Print customizable carton labels, pallet labels, and packing lists
- Capture weights directly from a scale
- Scan and select orders, cartons, and items
- View item messages
- Palletize orders

This makes the entire process faster and more efficient.

WHAT INDUSTRIES USE IT?

This WMS is well-suited for the manufacturing, retail, and wholesale sectors, where efficient warehouse management is a business-critical need.

It accommodates diverse operational requirements, including support for multiple warehouse locations, scalability, and the flexibility to grow with evolving business demands.
