3PL Central

3PL WAREHOUSE MANAGER

Aimed at helping third-party logistics companies manage their business, 3PL Warehouse Manager is an on-demand cloud WMS which integrates with other warehouse management technologies including online shopping carts, EDI and barcode scanning.

3PL Warehouse Manager is an end-to-end WMS covering everything from e-Commerce and shipping to accounting and reporting. Features include real-time global inventory visibility, customer specific costings, customized user access security levels, bespoke packing slips, order allocation, FedEx and UPS integration and mobile barcode scanning. The WMS can link EDI partners to shipping providers and e-commerce platforms, enabling users to communicate with their network via the cloud.

As 3PL Warehouse Manager is based entirely in the cloud, there is no software to install and all information is available via any device with an internet connection.

A free 30-day trial is available online, and ongoing prices are calculated according to individual company requirements. Training and support are available according to the options chosen.

bcp

ACCORD

Accord® WMS software from BCP provides stock solutions for distribution and in-store management. Both retail and wholesale functions are catered for within the Accord® product.

With a platform that covers both retail and wholesale, BCP is able to provide functionality for both markets, allowing for multi-channel communications and efficient performance. Covering all parts of stock management from procurement through to analytics, Accord® would be ideal for business looking to contain their warehouse and sales software solutions within a single entity.

One of Accord®'s primary features is the use of RF and Voice technologies, allowing for fast and efficient use within the working environment which is able to be used both hands-free and eyes-free. With all BCP's services coming through Accord® it is also ideally suited for analysis at each level of the business - financial, stock, performance or other areas.

Accord® has cloud-based architecture, optimized for mobile and desktop usage to provide service across all related operations, with dedicated 24/7 support provided by BCP and a focus on R&D so the latest techniques and software are available.

VIEW COMPLETE PROFILE

ACCUPLUS 3PL WMS

Accuplus 3PL WMS is a warehouse management system that serves smaller companies in the North American 3rd party logistics industry.

The software has been developed to be an easy to use, comprehensive WMS with the ability to manage multiple warehouses and documentation while providing a variety of useful and well laid out reports. Customer visibility and event management are at the heart of the design.

Accuplus 3PL WMS is made up of a set of base systems and optional subsystems, which are bolted on to create a bespoke solution for an SME. The base systems include lot tracking, barcode label printing, and RFID compliance. LogiView is one of the key optional subsystems features, which can also be purchased as a separate SaaS package. It combines real-time aggregation, monitoring, and analysis tools to give users a control-tower view of the entire warehouse. The logistics portal collates information from across the warehouse to create useful reports on potential optimizations. Alongside it is a host of other subsystem features such as Haz/Mat and Distributor/Broker.

The Accuplus 3PL WMS platform comes as either a cloud or on-premise solution.

AFS WMS

AFS WMS is a cloud-based system suited to 3PL, wholesale distribution, food service distributions and retail warehouses. It can handle goods that are both perishable and non-perishable.

One of AFS WMS's key strengths is ease of use on the warehouse floor, dealing with the inventory and trailers being received. The software offers a range of core features, including barcoding/ serial tracking, cross-docking, inventory management, and picking and packing. The AFS WMS G2 data analytics solution can be integrated with the WMS should this functionality be required, but does not come as standard.

Dashboards in AFS WMS are configured for ease of use to enable managers to track expected inbound orders and other metrics easily, whilst ser prompts for seal number and temperature on arrival prevent difficult compliance issues further down the line. Elsewhere, QC questions can be prompted by managers at the time of delivery based on the data being entered by the receiving worker.

To further facilitate the use of AFS WMS, native iOS and mobile apps for use on tablets and smartphones are available. 24/7 support is available with a live rep. AFS offers implementation assistance and gives the option of hiring an implementation consultant. They also offer onsite training once the system is live.

AIMTEC DCIX

Aimtec DCIx is a system that controls logistics processes in warehouses and production, from receipt to shipment. The WMS provides an overview of the product flow in real time using automated identification of handling units and warehouse positions by employing bar codes, RFID, pick-by-voice, pick-by-light, augmented reality or by technologies run by weight systems and automated warehouse rack systems.

Aimtec DCIx offers set of preconfigured functions based on industry best practices. The WMS can be integrated with manufacturing execution, quality management, yard management and, supply chain portals.

Aimtec DCIx is a WMS that can be installed on-premise or hosted via the cloud, it is applicable for use by most manufacturing, production, logistics and supply companies which handle non-perishable goods. The system requires no additional programming to adapt to unique customer requests due to the easily configurable architecture.

Aimtec DCIx can also be integrated with major ERP systems, such as SAP, MS Dynamics, and others, and Aimtec provides global 24/7 multilingual support.

AVECTOUS WMS

Avectous WMS is one-third of the Avectous Integrated Software suite, the other two parts being channel and order management systems. The platform is designed to promote seamless management and data flow across organizations. It is in use across a wide range of industries, including 3PL, manufacturing, retail and e-commerce.

Avectous WMS offers users a real-time view of inventory and current orders. The WMS is able to automate much of the warehouse management process, including; receiving, inspection, putaway, and picking. Avectous can integrate with Amazon, eBay, Groupon, and Walmart as well as a range of other order management and enterprise software systems.

Avectous WMS can be accessed remotely, allowing for warehouse employees to continue work without the need to return to a central office area. Users can access the system on any device with a browser and the WMS also integrates with RFID scanners and other handheld warehouse devices.

The WMS can be installed on-premise or deployed as a cloud-based solution. It is 100% proprietary and is offered on an unlimited user software license. Avectous provides an initial warehouse consultation, user training, implementation support and help with integration.

CADENCE WMS

Cadence WMS is a warehouse management system that aims to integrate warehouse operations with logistics and fulfillment. It is targeted at medium to large sized enterprises in the logistics, supply chain and manufacturing industries.

The product's key use is the management of complex logistical operations in businesses with multiple clients, suppliers, distributors, and warehouses. It combines order management, transport management, activity billing and warehouse management in a single, comprehensive package. It works in real time to deliver business critical data to staff and management via a complete infrastructure of wireless, handheld computers and desktop devices.

Cadence WMS includes kitting, cycle counting, receiving and putaway functionality. The order management tools include EDI, call center orders, and eCommerce functionality. The solution is backed up with comprehensive mobile infrastructure installation upon which the software will run, which gives staff real-time RF alongside both speech and browser interfaces.

Cadence WMS can be installed onsite or hosted via the cloud and the purchase price includes both hardware and software installation. While the software will run on standard desktops, mobile hardware installation is necessary for shop floor operation. The platform also integrates with 3rd party finance and ERP systems.

CARTONCLOUD

CartonCloud is an easy-to-use (TMS) transport management system and (WMS) warehouse management system with a mission of making complicated logistics simple.

CATALYST WMS

Catalyst WMS, from Aptean, is a system designed for use by companies of any size with complex supply chain and distribution requirements. The system is specialized for users with multi-site and multi-channel business processes.

Inventory, labor, and yard management are some of the systems key offerings. The system operates on a rule-based workflow, meaning that users can set event-triggered rules as a means of automating their business process. This event-based system also means that Catalyst can be customized to meet existing business processes and integrate with existing enterprise software applications.

Outside if the expected WMS applications, Catalyst also offers dynamic route planning and cross docking, features designed to cater for the needs of multi-facility companies.

A cloud-based WMS, Catalyst can integrate with ERPs and order management platforms, and can, of course, be combined with Aptean software products.

CIN7 WMS

CIN7 focuses on connectivity and integration. The omnichannel solution allows the stock to be managed while selling from different platforms, this being applicable for both retail and wholesale industries. Through EDI, users are connected with trading partners and third party logistics companies across the world, including via mobile devices.

Features of Cin7 include mobile pick and pack, allowing stock-taking on the move, Bluetooth scanners, wireless barcode printing and real-time consignment tracking. Users are able to assign fixed zones and track stock outside of their own branches and pick orders without having to manually complete a form.

CIN7 WMS is cloud based, so is, therefore, accessible on any device with an internet connection. It has been developed to integrate seamlessly with other CIN7 modules including CIN7 Retail and CIN7 Inventory.

DATEX FOOTPRINT WMS

Datex FootPrint WMS is a software package aimed at medium-sized companies in the manufacturing and supply chain industries.

The solution is designed for firms aiming to streamline their warehousing and inventory management systems by processing data in real time. It is built using Microsoft's.NET technology and uses Microsoft SQL Reporting Services and so is ideal for Microsoft houses or companies already used to working with Microsoft software. Datex FootPrint WMS has been validated for Microsoft Gold Partner Competency for Software Application Development.

Key features include a yard management module that allows users to monitor and optimize inventory flow through a warehouse or yard in real time. The trans-load feature allows users to enter information about inbound and outbound inventory into a single window to enable the synchronization of shipping and receiving processes. The core WMS module allows for blind, partial and bulk receiving and incorporates a directed, automatic putaway feature.

Datex offer three cloud-based packages of FootPrint WMS (SaaS, Flex, and Enterprise), each offering a different level of services and control, with an on-premise installation is also available. FootPrint WMS is accessible via a web browser on desktop and mobile devices.

ENTERPRISE WMS

Ramp's Enterprise WMS is designed for companies of all sizes. Whilst the software can be adapted for a variety of needs, Ramp specializes in providing solutions for 3PL providers.

One of Enterprise WMS' key selling points is its dynamic reporting functionality. The WMS software provides customized, real-time reporting capabilities and aims to make business data much more accessible for warehouse managers. It also offers a wide range of customizations, including Amazon and eBay, Quickbooks and Microsoft Dynamics.

Enterprise WMS is a "complete" solution and offers a comprehensive range of core WMS features alongside some extras, including dock management, route planning, and shipping management. Ramp Software also offers Interchange EDI alongside their WMS, which is designed to streamline integration activities.

The WMS can be deployed as a cloud-based solution or on-premise. Pricing is based on a one-off per user license fee, with the price decreasing after the first 20 licenses. A native Android app is available for users who want to access the software via mobile devices. The implementation time of Enterprise WMS varies on the complexity of the project.

KHAOS CONTROL

Khaos Control is an inventory management solution that comes equipped with an integrated WMS. It is aimed at small to medium sized businesses in a range of B2B and B2C industries.

The key product is real time stock control at multiple sites via multiple sales channels although a big emphasis is also placed on drop shipping. The solution allows companies to automatically generate and forward purchase orders to suppliers alongside official documentation that facilitates efficient drop shipping and order fulfillment.

The WMS comes as an additional feature, which can be integrated with hand held terminals that Khaos Control install. The software can be deployed across a range of hardware and delivers real-time, business critical information to staff and management in order to optimize warehouse operations at multiple sites. Another key feature is the Khaos Control Matrix, which affords companies and their clients the ability to drill down on products to quickly see the availability and stock level of each variety.

LISA DISTRIBUTION WMS

LISA WMS is an end-to-end warehouse management add-on that is seamlessly integrated with SAP Business One (SAP-Certified) and SAP Business ByDesign. LISA provides the tools required to optimize warehouse operations and increase visibility, accuracy and overall efficiency across the inbound and outbound supply chain.

Available in three different packages (Starter Pack, Express & Distribution), LISA WMS is a scalable system designed to meet the requirements of small and medium businesses as well as subsidiaries of larger organizations.

LISA WMS provides the features and functions to extend SAP's power into warehouse operations for wholesale distributors, manufacturers, and retailers. LISA helps companies to be more agile and responsive while enabling them to achieve higher service levels and customer satisfaction. Key features include: cross-docking, directed picking and put-away, containers management, shipping, EDI, RMA management and much more. Additionally, LISA can support production activities (pick, pack, transfer, issue) for manufacturers.

LOGIMAX WMS

Logimax is a warehouse management system that leverages the strength of the IBMi platform. It is built for 3PL and multi-customer warehouse businesses. It is also suitable for distribution companies in industries such as consumer packaged goods, pharmaceuticals, cold storage and more.

Logimax WMS is web-based and can be installed on-premise or in the cloud. It can also integrate with the company's existing systems like ERP, EDI, TMS and more. Logimax offers a warehouse management foundation with additional modules such as e-commerce and yard management that can be added as needed. Users have access to various analyses and reports to monitor KPIs, trends, revenue, costs and more.

For every customer or product, every transaction is automatically adjusted to meet the criteria associated with that customer so that rules, rates, packing and location preferences can all be enforced. Logimax also offers support for RF data collection, integrated third-party billing, a report designer and a client self-service portal.

LOGIWA WMS

Logiwa WMS is a warehouse management and order fulfillment platform designed for small and medium-sized businesses working in the retail, e-commerce and 3PL sectors. It has been built using a .NET framework, which allows the system to adapt to the individual business environment.

The WMS has a dashboard that allows for a quick overview of all aspects of management of the warehouse. As well as this screen overview, Logiwa WMS offers such functions as a bottleneck viewer and a multi-buffer inventory, as well as the more standard order management and order packing. The software is designed to aid the processes from receipt of products into the warehouse through to shipment to the customer.

Logiwa WMS offers real-time data that is available through an internet connection. It can also support the use of different technologies, including RFID, barcoding, light, voice and automated material handling services (MHS).

Logiwa WMS is delivered via the cloud and is, therefore, accessible from any device with a browser installed. Functions are also available on mobile devices through native iOS and Android apps, which help warehouse employees work remotely without having to return to a central office for the next assignment.

Magaya®

MAGAYA WMS

There are five main apps available with the Magaya Warehouse Management System.

1. WMS Mobile - Run the WMS solely from a mobile device
2. POD Mobile - Facilitate the pickup and delivery of parcels using handheld devices
3. Barcode Scanner - Log inventory information via barcodes
4. Scale Integration - Capture the weight and dimensions of packages
5. LiveTrack - Allows users to track packages in real time

Magaya also offers a range of other services to integrate with the WMS, including; supply chain solutions and e-Commerce.

Magaya WMS also enables users to control and manage their cargo inventory before it arrives in the warehouse using tracking software. Further key features include picking and loading, automated billing, online transaction tracking, remote label printing, reporting and warehouse sequencing.

Magaya is a cloud-based WMS; wireless handheld devices enable users to manage their business processes from any location with an internet connection. Or users can opt for the system to be installed onto computers.

A range of support services are available, including tech support and setup, plus implementation and training. Magaya WMS is a modular system, meaning that packages are selected according to the individual business requirements.

ORACLE | NETSUITE

NETSUITE WMS

NetSuite warehouse and fulfillment software forms part of the company's larger cloud ERP suite of applications. The warehouse management component of this suite offers core functionality including inventory, receiving and putaway, order fulfillment and cycle counts.

NetSuite WMS functions are supported by real-time data visibility which can be monitored through user dashboards. Through dashboards and real-time visibility, NetSuite users can access inbound and outbound KPIs and monitor labor productivity.

Netsuite WMS can be used with wireless RF/mobile handsets and also offers bar code scanning capabilities.

Netsuite WMS can be used as a further solution alongside the Netsuite platform, or installed as its own system using Netsuite WMS Lite.

NORTHSTAR WMS

NorthStar WMS is a solution by NorthStar Automation aimed at small, medium and large companies in the distribution, 3PL, manufacturing and food industries.

NorthStar software is suitable for organizations looking for a single, highly customizable WMS solution for their warehouse operations. Built on the .NET framework, it is appropriate for Microsoft houses or organizations already using Microsoft technologies. It is compatible with all major mobile wireless scanners, document scanners, and barcode printers.

One of the NorthStar's solution's key features is its receiving functionality, which gives users the ability to validate receipts, schedule receiving and apply put-away logic per order and/or per vendor. The quality assurance module allows users to set up logical and virtual QA and quarantine locations for checking inbound and outbound goods. NorthStar WMS is a web based application can be deployed in the cloud or installed on premise. The software can be accessed via web browsers on desktop and mobile devices.

ODOO INVENTORY

Odoo Inventory aims to maximise warehouse efficiency via its open source software platform by offering users a smart double inventory system.

The Odoo Inventory software has no stock in, out or transformation system, instead the operations are handled as moves between locations. This allows users to track stock from purchasing, through to warehouse bins and onto sales orders, all from one system.

A customizable system, Odoo is open source, meaning users can access and modify the system at a code level. Whilst more basic customizations are available such as custom automation rules. The system integrates with other Odoo apps such as Sales, Purchase and Accounting and offers integration with many third party 3PL systems.

An online WMS, Odoo can be accessed via any device with an internet connection. Users can use the WMS on a free plan and add additional business process modules at a cost.

OPTIMISER WMS

Optimiser is a flexible WMS designed to increase warehouse efficiency for small to medium sized businesses across a number of sectors. It can be used as part of e-commerce, third party logistics or in the management of an own-goods warehouse.

Optimiser WMS aims to be cost-effective for SMBs in two key ways. First, the software is modular, meaning that businesses can buy into portions of the software that will most benefit them and then keep adding to the modules as the enterprise grows. This means there is a clean upgrade path, keeping the WMS relevant into the future. Secondly, as there is a SaaS (cloud platform) option, there is no need for new or growing businesses to invest heavily in IT or hardware.

Basic functions of the Optimiser WMS include importing orders, recording dispatches, tracking stock and real-time reports. Optimiser WMS is also able to integrate with platforms such as Amazon, eBay, Magento, and Shopify. It can also link directly to couriers such as DPD, Royal Mail, Yodel, APC and more, as well as offering an automatic choice of courier through GFS or Metapack.

The software can be deployed via the cloud or can be installed on-site, with a native web app for remote access on mobile devices. Pricing is based on a per-user basis, and implementation will typically take around five weeks.

PTC MOVE

PTC MOVE is an on-premise WMS designed for use by medium to large sized enterprises. In use across a range of industries, including high-tech electronics, retail and consumer products, oil and gas and 3PL, it offers fulfillment professionals control over operations strategy in traditional bricks and mortar settings.

PTC MOVE WMS acts as a fulfillment engine for e-commerce enterprises and manages the sale from order to final delivery – with real-time inventory information to ensure the order can be fulfilled. There are source level controls within the continuous cycle counting, distribution center optimization and real-time inventory management; this improves the use of space in the warehouse and allows for batching and the elimination of idle picking time.

Whilst the platform manages the order from beginning to end, PTC MOVE WMS allows for customization of shipments for individual customers. The client can demand unique delivery requirements and distinctive packaging. The platform also provides real-time shipment tracking, accurate order picking, and accurate shipping information.

PTC MOVE features include inbound and outbound logistics – such as cross decking, re-packaging, replenishment, and shipping. It also allows for inventory control and automation; ERP interface and the option for multi-language displays, configurable at the user level. Implementation takes around six to eight months, and users can choose from a range of training options to suit them.

PulseStar
Warehouse Management Software

STOCKER WMS

PulseStar's Stocker WMS is a warehouse management tool designed for small companies. The WMS is applicable for two warehouse types; wholesale and 3PL.

Stocker WMS covers all basic warehouse management functions, including inventory management, barcode and serial tracking, picking and packing and product rotation. Users can also use analytics functions, powered by real-time data, to drill down into warehouse activities and find areas for improvement.

Stocker WMS can be used with PulseStar's 'Ranger' RF mobile device solution. This can increase warehouse productivity, improve the accuracy of picking activities and offer a real-time view of warehouse inventory. Whilst it can be implemented without mobile devices this turns Stocker into a paper driven system, and instructions must be printed out and handed to warehouse staff.

The Stocker WMS is installed on-premise. There is a one-off license fee for use, and the software will run on any computer on the Windows operating system. On-site training and implementation services are available an extra charge, and licenses include basic email support and issue reporting.

IntelliTrack

STRATUS ISRP

IntelliTrack Stratus ISRP combines four integrated functions - inventory, shipping, receiving and picking - to manage inventory and order fulfillment.

The web-based WMS solution integrates with QuickBooks to add barcode scanning, e-commerce integration, barcode label design, barcode printing and more to the Intuit system.

The software is available in English, Spanish and French, increasing its appeal to global warehouse operations.

VIN ERETAIL WMS

Vin eRetail WMS is a cloud-based system for companies supplying businesses and selling directly to customers.

Vin eRetail integrates with many of the leading eCommerce sites such as Amazon, eBay, Lazada, Flipkart and Snapdeal and then with the third-party logistics and last-mile fulfillment companies. Vin eRetail WMS is a multi-channel retailing solution aimed at moving beyond just eCommerce and including integration with other retail and manufacturing ERPs.

Vin eRetail WMS also allows for the segregation of your inventory based on clients. This allows managers to be more efficient and accurate in the control of inventory. Vin eRetail also allows for a single client to managed through one screen, which can avoid potential errors in the system. If the order is going directly to the consumer then this WMS allows for unique small orders to be selected whilst maximizing pick quantities and reducing travel time.

The Vin eRetail billing system allows for fixed billing periodically and for miscellaneous charges to be billed when and if they are needed. This is all managed in a timely manner through the 3PL billing system.

Vinculum Group offers implementation support with specialist integration services during installation.

WAREHOUSE EXPERT

Warehouse Expert from Made4Net aims to manage the entire warehouse cycle process, from receiving through to storage, shipping and replenishment.

Made4Net's Warehouse Expert system is based on SOA Microsoft technology, the system can be customized to meet industry specific needs and requirements. Real-time data is collected at each stage of the warehouse process and is displayed on a warehouse map along with location of pallets, performance and utilization metrics.

Warehouse Expert can integrate with Microsoft Dynamics, SAP Business One and other major ERP systems, meaning companies can remain with their existing ERP and enhance their warehouse management system.

In terms of technology, Warehouse Expert can be configured to operate with RF and voice terminals, RFID as well as a range of ERP software systems and accounting software systems.

Software Features

✔ Barcoding/Serial Tracking

warehouse management software

WIRELESS WAREHOUSE IN A BOX

Wireless Warehouse in a Box was designed specifically for multi-client warehouse businesses. Its 3PL warehouse management software delivers real-time information to access controlled users.

Wireless Warehouse in a Box allows users to bill clients, process orders, track deliveries and handle all stages of warehouse management via hand-held devices connected to cloud storage. Features include barcode scanners, inventory management, multi-system integration with platforms such as Quickbooks.

Wireless Warehouse in a Box gives users real-time visibility into their daily processes and has been designed to manage some of the world's most complex and high volume warehouse environments. Picking, packing and shipping processes are streamlined, plus cross-docking and flow-through capabilities results in users being able to optimise warehouse space.
