3PL WAREHOUSE MANAGER

Extensiv 3PL Warehouse Manager is the industry-leading, cloud-based warehouse management system (WMS) designed to meet the specific demands of the 3PL (third-party logistics) warehousing community. Acting as the operational backbone for its customers, it helps 3PLs transition from paper-based, error-prone processes to efficient, customer-centric operations that promote faster growth and higher customer satisfaction.

Extensiv 3PL Warehouse Manager has over a decade of success, processing 1 million+ orders weekly and managing billions in inventory. It offers seamless inventory control and automation, helping 3PLs scale efficiently. On average, clients grow orders by 22% yearly and save 161 hours per month by automating manual tasks.

ACCESS MINTSOFT WMS

MintSoft is The Access Group's cloud-based warehouse management system designed to support small to mid-sized eCommerce retailers, 3PL providers, and growing brands managing in-house warehousing.

The platform brings together inventory management, order processing, picking and packing workflows, shipping integrations, and billing into a single system. Users can manage multiple warehouses and clients from one interface, making it particularly relevant for fulfilment houses and 3PLs that need clear separation between customers while maintaining centralized control.

MintSoft integrates with a wide range of platforms, marketplaces, and carriers. This allows orders to flow automatically into the warehouse, with stock levels updating in near real time as goods are received, picked, packed, and dispatched. Barcode scanning is built into core workflows to reduce manual errors and support faster, more consistent fulfilment processes.

Software Features

ABECAS INSIGHT

Abecas Insight software is an enterprise WMS specifically designed for the 3PL industry. Multi-tenant, multi-user, multi-location capable, Abecas includes built-in accounting, EDI, customer web portal, report writer with forms and label generators.

Abecas moves well beyond standard inventory management and order processing to meet the specific needs of 3PLs of all sizes, including transactional and storage billing, and freight and fleet management solutions to support your unique requirements. With fully integrated accounting, Abecas Insight captures charges automatically and transfers them to AR without the need for re-keying.

Advanced reporting and dashboards allow you to capture and display KPIs in handy "snap shots" that combine financial and operational data, providing visibility into your business processes and their impact on your bottom line. Additional modules include barcode scanning, asset tracking, expense tracking, preventative maintenance, repair management, fuel and mileage taxes and more.

ACCORD

Accord® WMS software from BCP provides stock solutions for distribution and in-store management. Both retail and wholesale functions are catered for within the Accord® product.

With a platform that covers both retail and wholesale, BCP is able to provide functionality for both markets, allowing for multi-channel communications and efficient performance. Covering all parts of stock management from procurement through to analytics, Accord® would be ideal for business looking to contain their warehouse and sales software solutions within a single entity.

One of Accord®'s primary features is the use of RF and Voice technologies, allowing for fast and efficient use within the working environment which is able to be used both hands-free and eyes-free. With all BCP's services coming through Accord® it is also ideally suited for analysis at each level of the business - financial, stock, performance or other areas.

Accord® has cloud-based architecture, optimized for mobile and desktop usage to provide service across all related operations, with dedicated 24/7 support provided by BCP and a focus on R&D so the latest techniques and software are available.

ACCUPLUS 3PL WMS

Accuplus 3PL WMS is a warehouse management system that serves smaller companies in the North American 3rd party logistics industry.

The software has been developed to be an easy to use, comprehensive WMS with the ability to manage multiple warehouses and documentation while providing a variety of useful and well laid out reports. Customer visibility and event management are at the heart of the design.

Accuplus 3PL WMS is made up of a set of base systems and optional subsystems, which are bolted on to create a bespoke solution for an SME. The base systems include lot tracking, barcode label printing, and RFID compliance. LogiView is one of the key optional subsystems features, which can also be purchased as a separate SaaS package. It combines real-time aggregation, monitoring, and analysis tools to give users a control-tower view of the entire warehouse. The logistics portal collates information from across the warehouse to create useful reports on potential optimizations. Alongside it is a host of other subsystem features such as Haz/Mat and Distributor/Broker.

The Accuplus 3PL WMS platform comes as either a cloud or on-premise solution.

AIMTEC DCIX

Aimtec DCIX is a system that controls logistics processes in warehouses and production, from receipt to shipment. The WMS provides an overview of the product flow in real time using automated identification of handling units and warehouse positions by employing bar codes, RFID, pick-by-voice, pick-by-light, augmented reality or by technologies run by weight systems and automated warehouse rack systems.

Aimtec DCIX offers set of preconfigured functions based on industry best practices. The WMS can be integrated with manufacturing execution, quality management, yard management and, supply chain portals.

Aimtec DCIX is a WMS that can be installed on-premise or hosted via the cloud, it is applicable for use by most manufacturing, production, logistics and supply companies which handle non-perishable goods. The system requires no additional programming to adapt to unique customer requests due to the easily configurable architecture.

Aimtec DCIX can also be integrated with major ERP systems, such as SAP, MS Dynamics, and others, and Aimtec provides global 24/7 multilingual support.

AVECTOUS WMS

Avectous WMS is one-third of the Avectous Integrated Software suite, the other two parts being channel and order management systems. The platform is designed to promote seamless management and data flow across organizations. It is in use across a wide range of industries, including 3PL, manufacturing, retail and e-commerce.

Avectous WMS offers users a real-time view of inventory and current orders. The WMS is able to automate much of the warehouse management process, including; receiving, inspection, putaway, and picking. Avectous can integrate with Amazon, eBay, Groupon, and Walmart as well as a range of other order management and enterprise software systems.

Avectous WMS can be accessed remotely, allowing for warehouse employees to continue work without the need to return to a central office area. Users can access the system on any device with a browser and the WMS also integrates with RFID scanners and other handheld warehouse devices.

The WMS can be installed on-premise or deployed as a cloud-based solution. It is 100% proprietary and is offered on an unlimited user software license. Avectous provides an initial warehouse consultation, user training, implementation support and help with integration.

BLUE LINK ERP

One of BlueLink ERP's key warehouse management strengths is its ability to monitor complete order management, this includes order entry, through to inventory management then shipping. Blue Link ERP's accounting module allows users to manage accounts payable and receivable, plus payroll in-house. This is aided by multicurrency and multi-language functionality.

The core application of the platform is the inventory management functions, including order entry, purchasing, and procurement.

The platform allows for 6 to 50 concurrent users and can also be integrated with Amazon and eBay to help deal with inventory management and accounting. Blue Link ERP can be implemented on-premise or accessed through the cloud, with the hosted option priced on a subscription basis. Blue Link ERP has the option for remote desktop access, and native iOS and Android apps are available.

Further services from Blue Link include data migration, user training, customization and ongoing after-sales support.

CADENCE WMS

Cadence Warehouse Management System (WMS) from Cadre Technologies integrates warehouse operations with logistics and fulfillment. It is intended for medium to large sized enterprises in the logistics (3PL and 4PL), distribution and manufacturing markets.

Cadence combines order management, transportation management, activity billing and warehouse management into one product. It can manage businesses with multiple clients, distributors, suppliers, and warehouses. Delivering critical information to staff and management in real time using wireless, handheld computers and desktop devices.

The software's functionality includes receiving, directed putaway, different types of picking methods, shipping, kitting, cycle counting, labor reporting, and activity billing (3PL). Yard Management, advanced box building, dock door scheduling, customer portal and alerts can also be added. The order management tools include EDI, call center orders, and integration with eCommerce sites and shopping carts (Shopify, Amazon, Magento, etc.).

Cadence WMS can be installed onsite or hosted via the cloud. While the software will run on standard desktops, mobile hardware installation is necessary for shop floor operation. The platform also integrates with 3rd party finance and ERP systems.

CATALYST WMS

Catalyst WMS, from Aptean, is a system designed for use by companies of any size with complex supply chain and distribution requirements. The system is specialized for users with multi-site and multi-channel business processes.

Inventory, labor, and yard management are some of the systems key offerings. The system operates on a rule-based workflow, meaning that users can set event-triggered rules as a means of automating their business process. This event-based system also means that Catalyst can be customized to meet existing business processes and integrate with existing enterprise software applications.

Outside of the expected WMS applications, Catalyst also offers dynamic route planning and cross docking, features designed to cater for the needs of multi-facility companies.

A cloud-based WMS, Catalyst can integrate with ERPs and order management platforms, and can, of course, be combined with Aptean software products.

Software Features

- Cross Docking
- Inventory Management
- Order Management
- Picking & Packing
- Real-Time Data

[VIEW COMPLETE PROFILE](#)

CLOUD INVENTORY PLATFORM

Rather than a full WMS, Cloud Inventory Platform sits between your ERP and your warehouse floor. Rather than replacing your system of record, it adds a mobile-first execution layer on top of it.

It's for operations teams that need tighter inventory discipline but can't justify a WMS implementation.

Cloud Inventory Platform is popular among organisations that:

- Have an ERP but struggle with inventory accuracy
- Have inventory spread across multiple locations, including trucks, job sites, yards, or remote facilities
- Rely on mobile workers who need to scan, count, and move stock without being desk-bound
- Want cycle counting and receiving workflows that update the ERP in real time, not at end of day

It's less suited to those with more complex WMS requirements like slotting, cartonisation, labour management, or multi-client 3PL functionality, where a dedicated WMS would be the more appropriate choice.

The product has been around in one form or another for decades. Cloud Inventory was formerly Data Systems International (DSI), a Kansas City-based company with deep roots in supply chain mobility.

DATEX FOOTPRINT WMS

Datex FootPrint WMS is a software package aimed at medium-sized companies in the manufacturing and supply chain industries.

The solution is designed for firms aiming to streamline their warehousing and inventory management systems by processing data in real time. It is built using Microsoft's .NET technology and uses Microsoft SQL Reporting Services and so is ideal for Microsoft houses or companies already used to working with Microsoft software. Datex FootPrint WMS has been validated for Microsoft Gold Partner Competency for Software Application Development.

Key features include a yard management module that allows users to monitor and optimize inventory flow through a warehouse or yard in real time. The trans-load feature allows users to enter information about inbound and outbound inventory into a single window to enable the synchronization of shipping and receiving processes. The core WMS module allows for blind, partial and bulk receiving and incorporates a directed, automatic putaway feature.

Datex offer three cloud-based packages of FootPrint WMS (SaaS, Flex, and Enterprise), each offering a different level of services and control, with an on-premise installation is also available. FootPrint WMS is accessible via a web browser on desktop and mobile devices.

ENTERPRISE WMS

Ramp's Enterprise WMS is designed for companies of all sizes. Whilst the software can be adapted for a variety of needs, Ramp specializes in providing solutions for 3PL providers.

One of Enterprise WMS' key selling points is its dynamic reporting functionality. The WMS software provides customized, real-time reporting capabilities and aims to make business data much more accessible for warehouse managers. It also offers a wide range of customizations, including Amazon and eBay, Quickbooks and Microsoft Dynamics.

Enterprise WMS is a "complete" solution and offers a comprehensive range of core WMS features alongside some extras, including dock management, route planning, and shipping management. Ramp Software also offers Interchange EDI alongside their WMS, which is designed to streamline integration activities.

The WMS can be deployed as a cloud-based solution or on-premise. Pricing is based on a one-off per user license fee, with the price decreasing after the first 20 licenses. A native Android app is available for users who want to access the software via mobile devices. The implementation time of Enterprise WMS varies on the complexity of the project.

FishbowlAdvanced™

FISHBOWL ADVANCED

Fishbowl Advanced is Fishbowl's most powerful solution, combining strong on-premise controls with the convenience of cloud access. Designed for manufacturers, distributors, and wholesalers, it offers enterprise-level features perfectly scaled for small to mid-sized businesses.

It is designed to streamline warehouse and manufacturing processes and boost efficiency. For example, warehouse staff can scan items with mobile devices and update stock levels in real time, reducing paperwork. Fishbowl Advanced can be accessed via web browsers or mobile apps, enabling on-the-go management. (The older Fishbowl Anywhere mobile module has been replaced by these cloud/mobile tools.).

inFlow

INFLOW INVENTORY

inFlow Inventory is a cloud-based WMS from Archon Systems Inc. that provides businesses with end-to-end control over stock levels, order processing, and billing.

It suits small to mid-sized organizations seeking an easy-to-use inventory invoice software. Its barcode inventory system, flexible invoicing tools, and reporting capabilities help teams reduce manual errors and speed up operations.

Support for inFlow On-Premise (inFlow v3) officially ended on July 31, 2024, following a decade of reliable service. This decision was driven by rising operational costs. All efforts have since focused exclusively on enhancing and expanding the inFlow Cloud offerings.

Software Features

INFOR SCM

Infor SCM combines transportation management, warehouse management, labor management, and 3PL billing into a single application on a unified database to reduce the complexity of warehousing operations and make decision-making processes more efficient. Storing all data in a single database allows Infor to keep information in sync and up-to-date across different warehouse disciplines.

Infor SCM can be specialized by industry, offering unique functionalities to meet industry standard and requirements. Examples of these industries include food and beverage, pharmaceuticals and chemicals.

Infor SCM aims to improve gross margins and customer retention by helping to reduce inventory wastage and improve perfect order scores.

In terms of hosting, Infor SCM can be deployed in the cloud or on-premise. The software can be accessed via an iOS app and can be accessed remotely.

IWS

The Invar Warehouse System (IWS) is a WMS designed for use across a range of warehouse types, including, wholesale, 3PL and manufacturing.

The use of barcode technology in IWS allows for the tracking and controlling the storage and movement of goods and users can manage a range of transactions, including receiving, put-away, picking, and shipping. Invar WMS can be customized to each company's working practices, adapting to different picking strategies or different modes of stock management. The WMS is configurable for different workflows, whether pallet-based operations or package-based.

IWS provides real-time information of the flow of goods through the warehouse. All information on inventory, sales, and purchasing is constantly updated and integrated automatically. Invar WMS can be integrated with a range of other software, including Amazon, Quickbooks, Salesforce, and SAP.

The WMS can be delivered through the cloud or installed on-premise, and mobile access is available on both iOS and Android apps. Invar warehouse software solutions include manual WMS through to fully automated operations, these systems can be implemented modularly.

KHAOS CONTROL

Khaos Control is an inventory management solution that comes equipped with an integrated WMS. It is aimed at small to medium sized businesses in a range of B2B and B2C industries.

The key product is real time stock control at multiple sites via multiple sales channels although a big emphasis is also placed on drop shipping. The solution allows companies to automatically generate and forward purchase orders to suppliers alongside official documentation that facilitates efficient drop shipping and order fulfillment.

The WMS comes as an additional feature, which can be integrated with hand held terminals that Khaos Control install. The software can be deployed across a range of hardware and delivers real-time, business critical information to staff and management in order to optimize warehouse operations at multiple sites. Another key feature is the Khaos Control Matrix, which affords companies and their clients the ability to drill down on products to quickly see the availability and stock level of each variety.

LATITUDE WMS

Latitude WMS is an enterprise-grade WMS that automates warehousing and distribution to provide real-time online information about inventory. Latitude interfaces to 20+ ERP systems like SAP, Oracle/JDE, Epicor, Infor, and Microsoft, to name a few. Available on-premise or cloud-based, Latitude WMS automates core warehouse transactions such as receiving/putaway, paperless multi-zone picking, cycle counting and shipping, along with employee performance and warehouse management reporting.

Handling consignment and vendor managed inventories, lot number/serial number control, slotting optimization, replenishment, retail conformance and customer-specific labeling and packing lists are just a few of the 50+ optional modules available. Latitude WMS also provides necessary inputs to optimize conveyor throughput, package handling and control, as well as carousel system management, including pick-to-light.

The Latitude suite also offers carrier-compliant, small parcel manifest software that can be integrated with Latitude or stand-alone. Latitude provides the tools to manage truck route shipping, truckload verification, and on-site delivery confirmation, as well inbound transportation scheduling.

PathGuide's Advanced Vendor Managed Inventory (VMI) solution offers distributors complete visibility into supplier' management of inventory and re-imagines the restocking process for customers entrusted with managing inventory.

NETSUITE WMS

NetSuite warehouse and fulfillment software forms part of the company's larger cloud ERP suite of applications. The warehouse management component of this suite offers core functionality including inventory, receiving and putaway, order fulfillment and cycle counts.

NetSuite WMS functions are supported by real-time data visibility which can be monitored through user dashboards. Through dashboards and real-time visibility, NetSuite users can access inbound and outbound KPIs and monitor labor productivity.

Netsuite WMS can be used with wireless RF/mobile handsets and also offers bar code scanning capabilities.

Netsuite WMS can be used as a further solution alongside the Netsuite platform, or installed as its own system using Netsuite WMS Lite.

NORTHSTAR WMS

NorthStar WMS is a solution by NorthStar Automation aimed at small, medium and large companies in the distribution, 3PL, manufacturing and food industries.

NorthStar software is suitable for organizations looking for a single, highly customizable WMS solution for their warehouse operations. Built on the .NET framework, it is appropriate for Microsoft houses or organizations already using Microsoft technologies. It is compatible with all major mobile wireless scanners, document scanners, and barcode printers.

One of the NorthStar's solution's key features is its receiving functionality, which gives users the ability to validate receipts, schedule receiving and apply put-away logic per order and/or per vendor. The quality assurance module allows users to set up logical and virtual QA and quarantine locations for checking inbound and outbound goods. NorthStar WMS is a web based application can be deployed in the cloud or installed on premise. The software can be accessed via web browsers on desktop and mobile devices.

ODOO INVENTORY

Odoo Inventory aims to maximise warehouse efficiency via its open source software platform by offering users a smart double inventory system.

The Odoo Inventory software has no stock in, out or transformation system, instead the operations are handled as moves between locations. This allows users to track stock from purchasing, through to warehouse bins and onto sales orders, all from one system.

A customizable system, Odoo is open source, meaning users can access and modify the system at a code level. Whilst more basic customizations are available such as custom automation rules. The system integrates with other Odoo apps such as Sales, Purchase and Accounting and offers integration with many Third-Party 3PL systems.

An online WMS, Odoo can be accessed via any device with an internet connection. Users can use the WMS on a free plan and add additional business process modules at a cost.

Software Features

OPTIMISER WMS

Optimiser is a flexible WMS designed to increase warehouse efficiency for small to medium sized businesses across a number of sectors. It can be used as part of e-commerce, Third-Party logistics or in the management of an own-goods warehouse.

Optimiser WMS aims to be cost-effective for SMBs in two key ways. First, the software is modular, meaning that businesses can buy into portions of the software that will most benefit them and then keep adding to the modules as the enterprise grows. This means there is a clean upgrade path, keeping the WMS relevant into the future. Secondly, as there is a SaaS (cloud platform) option, there is no need for new or growing businesses to invest heavily in IT or hardware.

Basic functions of the Optimiser WMS include importing orders, recording dispatches, tracking stock and real-time reports. Optimiser WMS is also able to integrate with platforms such as Amazon, eBay, Magento, and Shopify. It can also link directly to couriers such as DPD, Royal Mail, Yodel, APC and more, as well as offering an automatic choice of courier through GFS or Metapack.

The software can be deployed via the cloud or can be installed on-site, with a native web app for remote access on mobile devices. Pricing is based on a per-user basis, and implementation will typically take around five weeks.

Software Features

- Barcoding/Serial Tracking
- Billing
- Cross Docking
- Inventory Management
- Kitting
- Order Management

ORDERFLOW

OrderFlow is a WMS for businesses that have moved beyond what a standard, off-the-shelf WMS can handle. Rather than delivering a fixed product that customers adapt to, OrderFlow configures its platform around each client's specific processes.

The system covers the full warehouse lifecycle: receiving, putaway, stock management, picking, packing, despatch, and returns. It operates as a web-based application, which means it runs in a browser on workstations, mobile handhelds, and other web-enabled devices without requiring dedicated software installs at each terminal.

PTC MOVE

PTCMOVE is an on-premise WMS designed for use by medium to large sized enterprises. In use across a range of industries, including high-tech electronics, retail and consumer products, oil and gas and 3PL, it offers fulfillment professionals control over operations strategy in traditional bricks and mortar settings.

PTC MOVE WMS acts as a fulfillment engine for e-commerce enterprises and manages the sale from order to final delivery – with real-time inventory information to ensure the order can be fulfilled. There are source level controls within the continuous cycle counting, distribution center optimization and real-time inventory management; this improves the use of space in the warehouse and allows for batching and the elimination of idle picking time.

Whilst the platform manages the order from beginning to end, PTC MOVE WMS allows for customization of shipments for individual customers. The client can demand unique delivery requirements and distinctive packaging. The platform also provides real-time shipment tracking, accurate order picking, and accurate shipping information.

PTC MOVE features include inbound and outbound logistics – such as cross decking, re-packaging, replenishment, and shipping. It also allows for inventory control and automation; ERP interface and the option for multi-language displays, configurable at the user level. Implementation takes around six to eight months, and users can choose from a range of training options to suit them.

SORTLY

Sortly is a cloud-based inventory management system for small to mid-sized organizations that need a straightforward way to track physical assets. It is commonly used by teams managing equipment, tools, supplies, or fixed assets across offices, job sites, storage locations, or warehouses.

The platform is available via web, iOS, and Android, allowing users to create, update, and audit inventory from desktop or mobile devices.

Sortly also supports a limited but focused set of integrations. These are primarily aimed at data exchange and workflow connectivity rather than full ERP or accounting coverage.

Common integration options include:

- Zapier, for connecting Sortly with other business tools
- API access (plan-dependent) for custom integrations
- CSV import/export for bulk data updates

Software Features

Barcoding/Serial Tracking
Inventory Management
Part Tracking
Picking & Packing
Real-Time Data
Reporting & Analytics
Third-Party Plugins

SPHEREWMS

SphereWMS software is geared towards eliminating paper-based management systems in organizations with multiple warehousing facilities. The key product uses are to drive workflow efficiency at an operational level while minimizing costs across the 3Ps.

To do this, SphereWMS is centered on functionality that improves a warehouse's receiving processes. Advance Receipt Notice and Advance Ship Notice handling tools allows users to quickly receive, send and file receipts and orders electronically and efficiently. In addition, the order fulfillment tool integrates customers' business requirements into the system, optimizing the fulfillment process. The SphereWMS dashboard feature allows for easy reporting and data display.

SphereWMS is a fully hosted, web-based cloud-based solution, which is also available via iOS and Windows Phone applications. The pricing model is based on a monthly, per-user subscription basis.

Software Features

- Barcoding/Serial Tracking
- Cross Docking
- Inventory Management
- Order Management
- Picking & Packing
- Real-Time Data
- Receiving & Putaway
- Reporting & Analytics
- Third-Party Plugins
- Wireless Warehouse

VIN ERETAIL WMS

Vin eRetail WMS is a cloud-based system for companies supplying businesses and selling directly to customers.

Vin eRetail integrates with many of the leading eCommerce sites such as Amazon, eBay, Lazada, Flipkart and Snapdeal and then with the third-party logistics and last-mile fulfillment companies. Vin eRetail WMS is a multi-channel retailing solution aimed at moving beyond just eCommerce and including integration with other retail and manufacturing ERPs.

Vin eRetail WMS also allows for the segregation of your inventory based on clients. This allows managers to be more efficient and accurate in the control of inventory. Vin eRetail also allows for a single client to be managed through one screen, which can avoid potential errors in the system. If the order is going directly to the consumer then this WMS allows for unique small orders to be selected whilst maximizing pick quantities and reducing travel time.

The Vin eRetail billing system allows for fixed billing periodically and for miscellaneous charges to be billed when and if they are needed. This is all managed in a timely manner through the 3PL billing system.

Vinculum Group offers implementation support with specialist integration services during installation.

WAREHOUSE EXPERT

Warehouse Expert from Made4Net aims to manage the entire warehouse cycle process, from receiving through to storage, shipping and replenishment.

Made4Net's Warehouse Expert system is based on SOA Microsoft technology, the system can be customized to meet industry specific needs and requirements. Real-time data is collected at each stage of the warehouse process and is displayed on a warehouse map along with location of pallets, performance and utilization metrics.

Warehouse Expert can integrate with Microsoft Dynamics, SAP Business One and other major ERP systems, meaning companies can remain with their existing ERP and enhance their warehouse management system.

In terms of technology, Warehouse Expert can be configured to operate with RF and voice terminals, RFID as well as a range of ERP software systems and accounting software systems.
