

PULPO WMS

EXTENDED PROFILE

OVERVIEW

PULPO WMS is a cloud-native warehouse management system built specifically for direct-to-consumer brands, online stores, and 3PL providers. It replaces spreadsheet-based processes with a digital twin of your warehouse, automating everything from goods receipt to shipping.

As a specialized eCommerce WMS software, PULPO WMS strikes a balance between ease of use and powerful warehouse automation. Users report fewer errors, faster fulfillment, and the ability to scale without adding headcount.

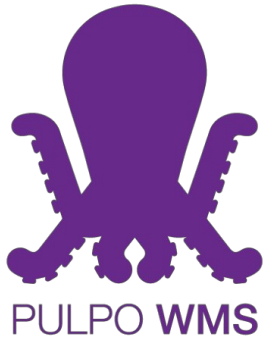

ECOMMERCE-FIRST INTEGRATIONS

PULPO WMS syncs bi-directionally with major platforms such as Shopify, WooCommerce, Magento, and more; orders, inventory levels, and shipping data update live across systems.

- **Shopify WMS integration:** Install directly from the Shopify App Store. Activate the plugin in the web app and start real-time syncing of products and orders without custom coding.
- **Shipping & ERP integrations:** Pull shipping labels from within the app and link to ERPs, OMS, or IMS tools for an end-to-end logistics workflow.

For businesses needing dedicated pick-and-pack software and seamless Shopify integration, PULPO WMS presents a competitive choice in the eCommerce WMS space.

Plans scale from small merchants handling tens of orders per day to large enterprises shipping thousands. Basic, Standard, and Professional packages cover core features; Enterprise includes deep customizations. Download our extended PULPO WMS software profile for a breakdown of the pricing tiers.
