

DESCARTES FINALE INVENTORY EXTENDED PROFILE

OVERVIEW

Finale Inventory is a cloud-based inventory, warehouse, and order management system designed to help multichannel sellers maintain accurate stock levels, streamline fulfillment processes, and coordinate inventory across online and offline sales channels.

It serves businesses that operate eCommerce platforms, marketplaces, physical stores, or a combination of channels with visibility into inventory in real-time and automating critical stock operations.

CORE FEATURES AND INTEGRATIONS

- **Multichannel inventory control:** Finale Inventory centralizes stock information from marketplaces like Amazon, OpenCart (via ShipStation), and physical point-of-sale systems into a single dataset.
- **Real-time tracking and automation:** The system continuously syncs inventory movements, reflecting sales, returns, and stock adjustments across channels within minutes. Users can set reorder points that trigger alerts when inventory falls below specified thresholds. Automation features extend to purchase order generation and supplier management, supporting stock replenishment without constant manual oversight.
- **Order management:** Supports bulk imports from spreadsheets, detailed tracking of supplier pricing and lead times, and automated recommendations for restocking based on historical data.

AMAZON BOPIS SUPPORT

Finale Inventory includes support for Amazon Local Selling and Buy Online, Pick Up in Store (BOPIS) workflows. Eligible sellers can list inventory for local pickup on Amazon, update available stock across channels from within Finale, and manage the pickup lifecycle without manual synchronization through Seller Central.

PRICING STRUCTURE

Finale Inventory is flexibly priced based on your requirements. Custom quotations are dependent, accommodating up to 300 users, 1.5 million orders, and 1.5 million products per month. Month-to-month and annual payment options are available.

SOFTWARE SCREENSHOTS

The screenshot displays the 'Inventory' section of the Descartes Replenishment software. The main view is titled 'Replenishment: Main view'. A table lists various T-shirt products with their respective sales velocities and stock levels. A sidebar on the right, titled 'Transfer Quantity', shows the total transfer quantity for each product row.
