

ACCESS MINTSOFT WMS EXTENDED PROFILE

OVERVIEW

MintSoft is [The Access Group's](#) cloud-based warehouse management system designed to support small to mid-sized eCommerce retailers, 3PL providers, and growing brands managing in-house warehousing.

The platform brings together inventory management, order processing, picking and packing workflows, shipping integrations, and billing into a single system. Users can manage multiple warehouses and clients from one interface, making it particularly relevant for fulfilment houses and 3PLs that need clear separation between customers while maintaining centralized control.

INTEGRATION OPTIONS

MintSoft integrates with a wide range of platforms, marketplaces, and carriers. This allows orders to flow automatically into the warehouse, with stock levels updating in near real time as goods are received, picked, packed, and dispatched. Barcode scanning is built into core workflows to reduce manual errors and support faster, more consistent fulfilment processes.

The system includes configurable rules for picking methods, packing validation, and shipping logic, enabling teams to adapt workflows to their operational model rather than forcing a fixed process.

Reporting tools provide visibility into order volumes, stock movement, fulfilment performance, and client-level activity, supporting day-to-day decision-making as well as longer-term capacity planning.

USER SENTIMENT

Customers appreciate the platform's breadth of fulfilment features and its suitability for multi-client operations. They also praise the vendor's onboarding and ongoing support, particularly for businesses migrating from spreadsheets or less specialized systems.

PRICING OPTIONS

Mintsoft offers flexible pricing plans based on user count and monthly order volume. All plans include the core tools for order, inventory, and warehouse management necessary for fulfillment and warehousing operations.

For businesses with more specific needs, there are optional add-on modules. These include 3PL functionality, order rules, batch scheduling, white-labeling, and advanced analytics dashboards, allowing users to pay only for the features they require.
