

FLOWTRACK WEB EXTENDED PROFILE

OVERVIEW

Flowtrack Web is a simple, flexible, and affordable cloud-ready WMS designed for smaller and growing organizations transitioning from manual, paper-based processes to paperless warehouse operations.

It provides intuitive inventory control, barcode scanning, and real-time visibility without the complexity and cost typically associated with enterprise warehouse management systems.

Developed by GCL Group, a warehousing and supply chain consulting firm with decades of hands-on implementation experience, Flowtrack Web is built on tried-and-true warehouse configurations and operational best practices proven across real client environments.

This results in faster deployment, practical functionality, and workflows that reflect how warehouses actually operate.

Flowtrack Web enables organizations to take ownership of their warehouse processes through configurable functionality that adapts to their operational needs.

The solution supports receiving, putaway, picking, packing, cycle counting, and order fulfillment without requiring heavy IT resources.

With straightforward implementation, transparent pricing, and a scalable architecture, Flowtrack Web is well-suited for distributors, light manufacturers, and logistics operations looking for a reliable entry-level WMS that can grow with the business.
